Streamlined access, joined-up IT

How Identity solves key NHS challenges

Improving clinical services through digital transformation is an important ambition for the NHS. Yet IT leaders face many hurdles along the way, as security threats multiply and constant restructuring leaves them dealing with complex legacy infrastructure. An Identity-first strategy can solve these challenges while creating a solid foundation for IT modernisation. Here's how.

Identity enhances efficiency

You may be dealing with a complex IT ecosystem comprising multiple domains, tenants and systems. Connect and integrate these so you have one centralised single source of truth to view, store and manage every Identity with ease – improving user application experience, efficiency, and cost-effectiveness.

It accelerates mergers of NHS trusts

A unified Identity layer allows you to quickly merge Identity across multiple NHS trusts in a matter of weeks with minimal disruption. Effortlessly connect all directories and applications of merged entities via a single admin console, turn on access from day one, and automatically deprovision employees no longer working with you.

It streamlines and automates the joiner, mover, leaver process

Automating the onboarding process ensures rapid access to NHS systems, giving back valuable time for patient care. Automating the offboarding process prevents the risk associated with manual processes ultimately resulting in cost savings.

It strengthens security, without adding friction

Basic MFA is no longer enough to mitigate today's cyber attacks. An Identity-powered security strategy helps mitigate risk with phishing-resistant passwordless access, without compromising user experience.

It improves application user experience

Don't let the strain of managing siloed Identity and security applications put your infrastructure and performance at risk. Hand the responsibility over to Okta so you can focus on delivering better care to your patients.

It stops Identity-based attacks

Proactively protect your systems and data in real-time with Attack Protection. Create a single dashboard to monitor Identity-based attacks across all IT systems, both on-premises and in the cloud.

Unlock the value of Okta Identity

Okta's Identity platform offers a comprehensive, cloud-based, centralised, flexible, and highly customisable approach to Identity Management that is designed specifically to meet the unique needs and requirements of the NHS. With the Workforce Identity Cloud, we provide a single solution for every Identity use case on one unified platform.
