Reduce Identity and Access Management Friction with Okta's Integrations for Microsoft Office 365

Discover how Okta's integrations for Microsoft Office 365 can help boost Office 365 operational efficiencies and simplify complex identity security challenges.

Why Okta's Integrations for Microsoft Office 365?

Rising identity breaches and operational inefficiencies are putting enterprises at risk. Okta's integrations for Office 365 can help tackle these issues quickly by allowing you to automate IT tasks and leverage Zero Trust security tools – offering fast time to value and strengthening defenses against security threats. With a set up that takes seconds, enterprises can lighten IT workloads, enhance security, and boost productivity – without additional infrastructure required.

Work More Securely and Efficiently

End-to-End Identity Security

Help secure your Office 365 environments with features like Single Sign-On (SSO), Multi-Factor Authentication (MFA), real-time provisioning, session termination with Partial Universal Logout, and adaptive access controls. These tools help ensure only authorized users access the right tools at the right time, reducing security gaps caused by manual updates.

With centralized identity management, businesses can trust that their data are safe, even in complex hybrid IT environments.

Simplified IT Operations

Okta helps decrease IT workload by automating user provisioning and account deactivation, reducing the need for complex infrastructure like Active Directory Federation Services (ADFS), speeding up deployments and lowers costs.

With automated workflows, IT teams can focus on strategic goals rather than time-consuming administrative tasks.

Flexibility and Scalability

With 8,000+ integrations, including non-Microsoft tools, you can create IT environments tailored to your unique needs without being restricted to a single vendor.

Okta's adaptable platform supports evolving business needs, ensuring a unified, future-ready identity management strategy for hybrid and cloud-first organizations.

okta

Integrate Secure Identity Capabilities for End-To-End Protection

Single Sign-On (SSO)

Users can log in with their AD credentials through Integrated Windows Authentication (IWA), providing a seamless experience by eliminating the need for additional passwords. This can enhance productivity while helping ensure a consistent and secure login experience across all devices.

Workflows

Okta's no-code, identity purpose-built connectors and templates enable businesses to automate repetitive identity management tasks like account provisioning and access reviews. These pre-built tools simplify and accelerate integration with enterprise systems, providing a fast, reliable way to streamline operations.

Lifecycle Management

Real-time provisioning and deprovisioning of user accounts, groups, and group memberships in AD enables efficient access management. Rich profile synchronization helps ensure employees receive the access they need promptly and automatically removes access when they leave the organization.

Okta Universal Logout

Partial Okta Universal Logout for Office 365 enhances session security by revoking refresh tokens during deprovisioning or session termination. This ensures that while existing sessions remain active until their access tokens expire or the user signs out, no new sessions can be started, helping to reduce the risk of unauthorized access.

Entitlements Management

With granular control, Okta can automate the assignment and management of Office 365 licenses, roles, and access permissions. Features such as selective role assignment and specific application license allocation increase efficiency and accuracy.

Identity Security Posture Management

Gain continuous, agentless visibility into your identity posture to uncover hidden risks like partially off-boarded users and SSO bypass to help prioritize remediation against identity-based threats.
